

Chapter 7

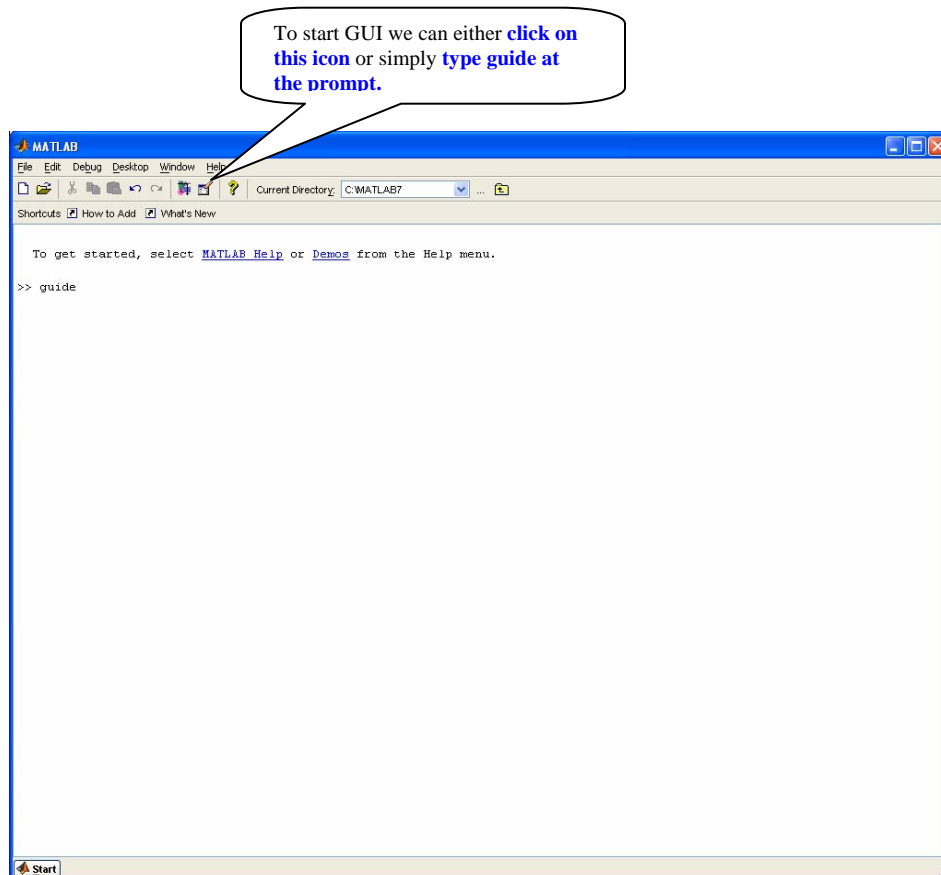

- Graphical User Interface with MATLAB -

How to get started?

There are two ways to launch Graphical User Interface (GUI). You can either

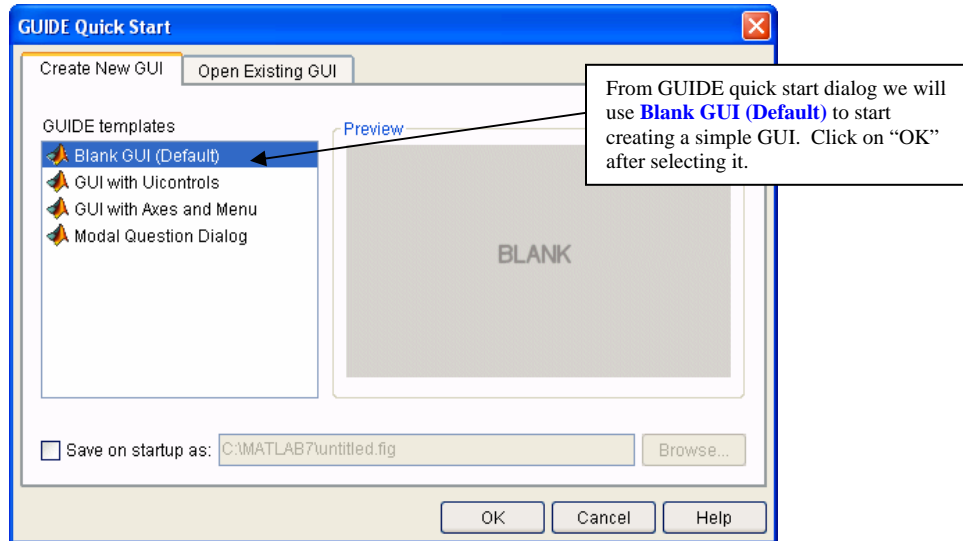

1. Click on the “Guide” icon
2. Type guide at the prompt

Just follow the instruction below:

Got a "Guide Quick Start" Window?

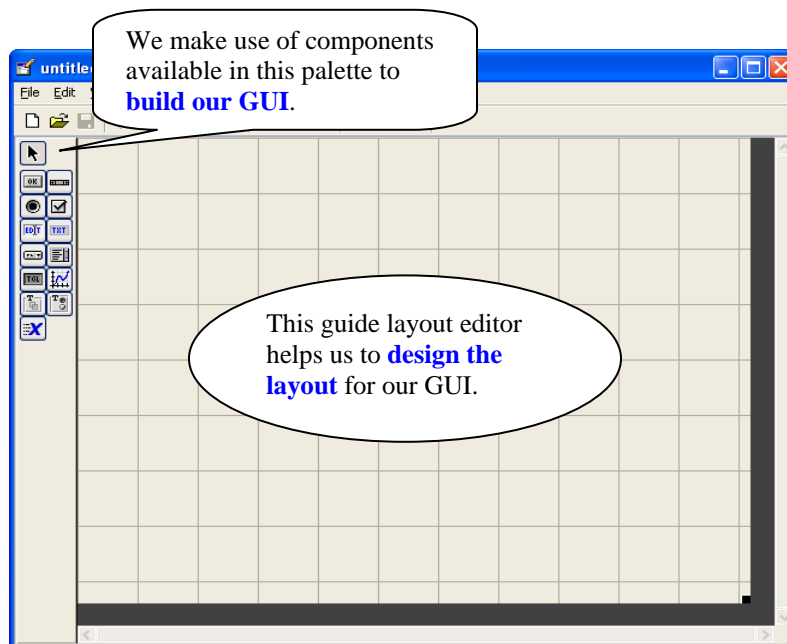

Next, we are going to create a simple Guide User Interface.

A New Untitled Window

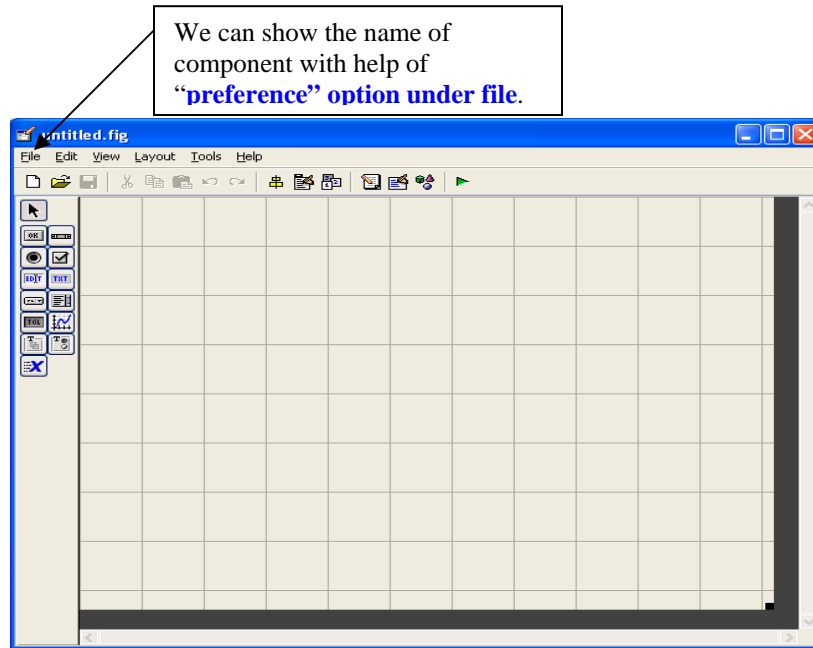

How to deal with a new GUI window?

Use the icons on the left to design the layout of your GUI.

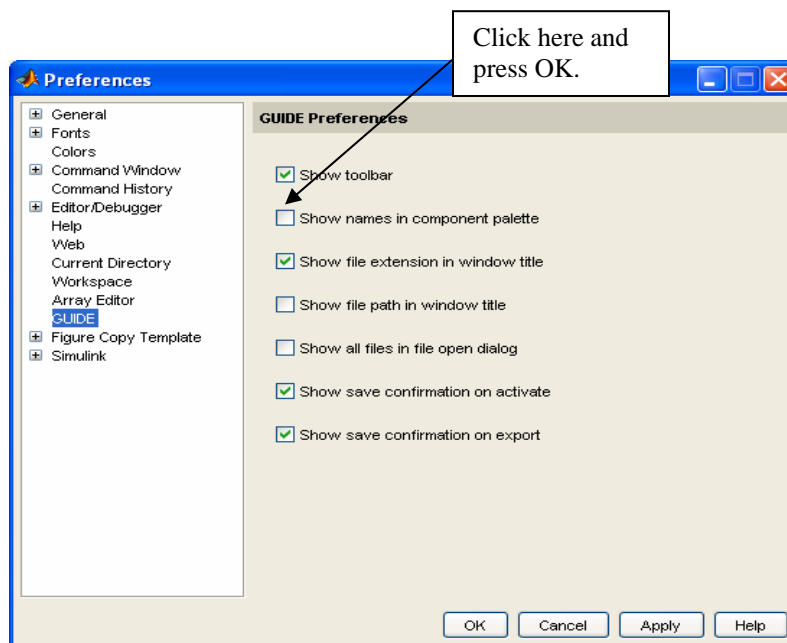

Component Palette

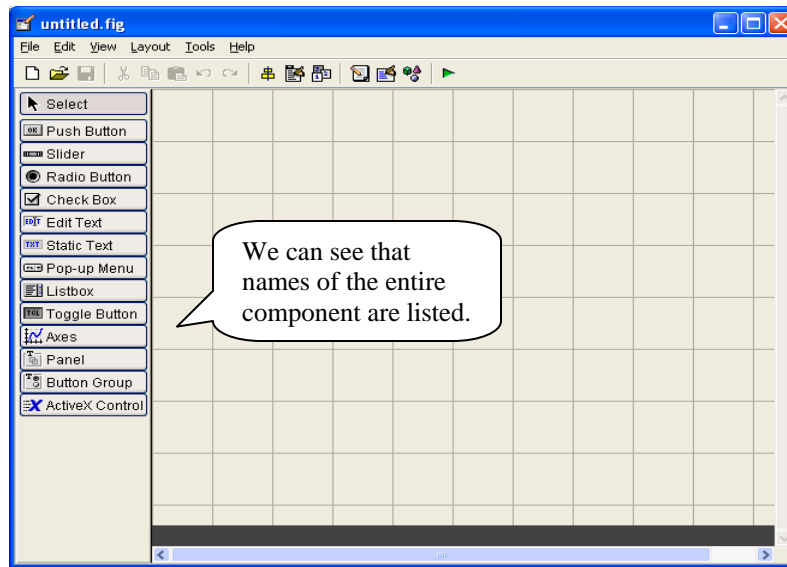

Want the names of these components to be shown?
You can do it by using the “preference” option under “file”.
Just follow the steps shown below:

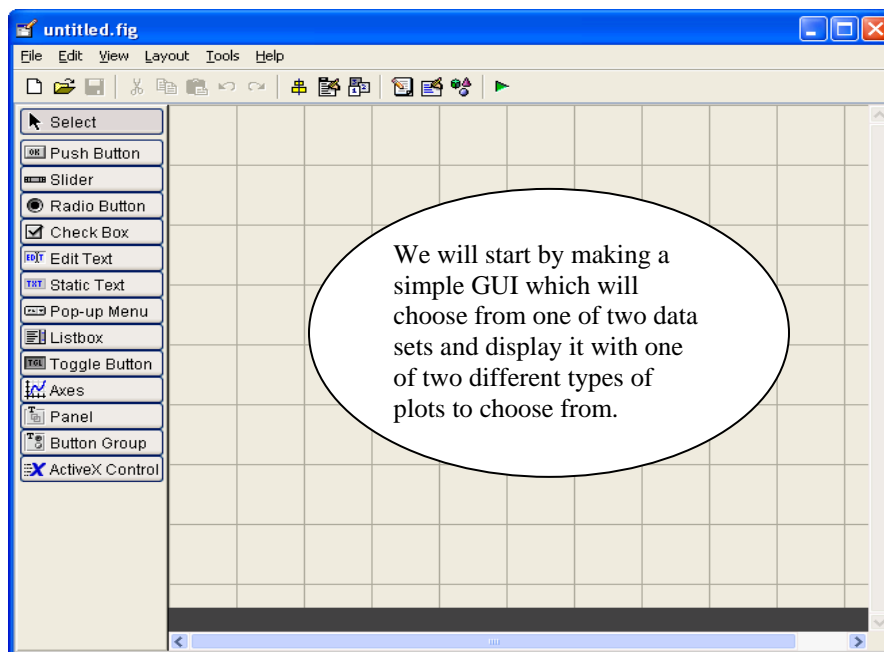

The Preferences window will pop up after you select “preference” option.

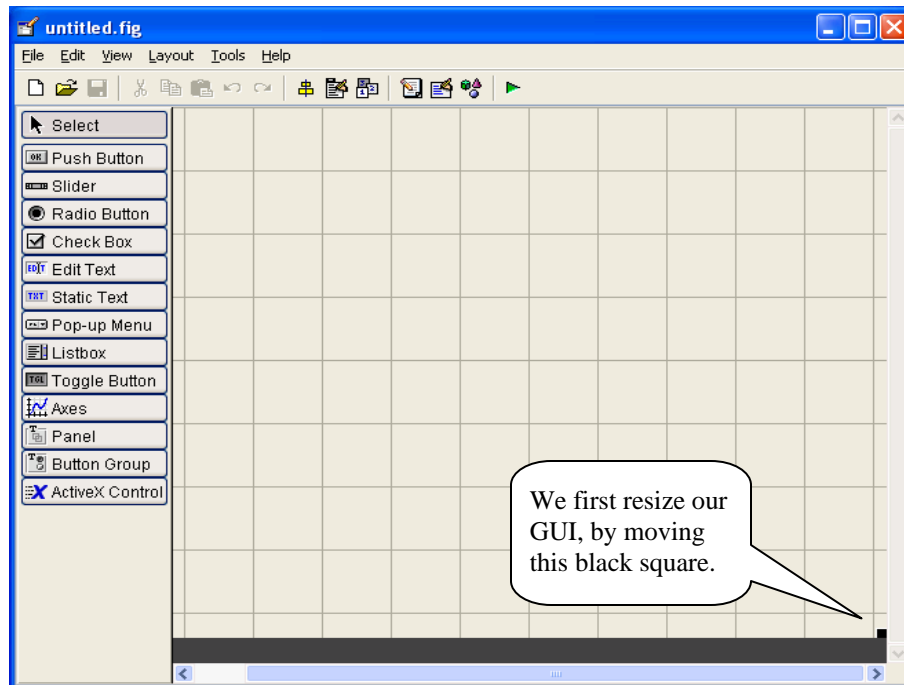

Now, you can see all the names of the components.

Let's Start Making a Simple GUI!

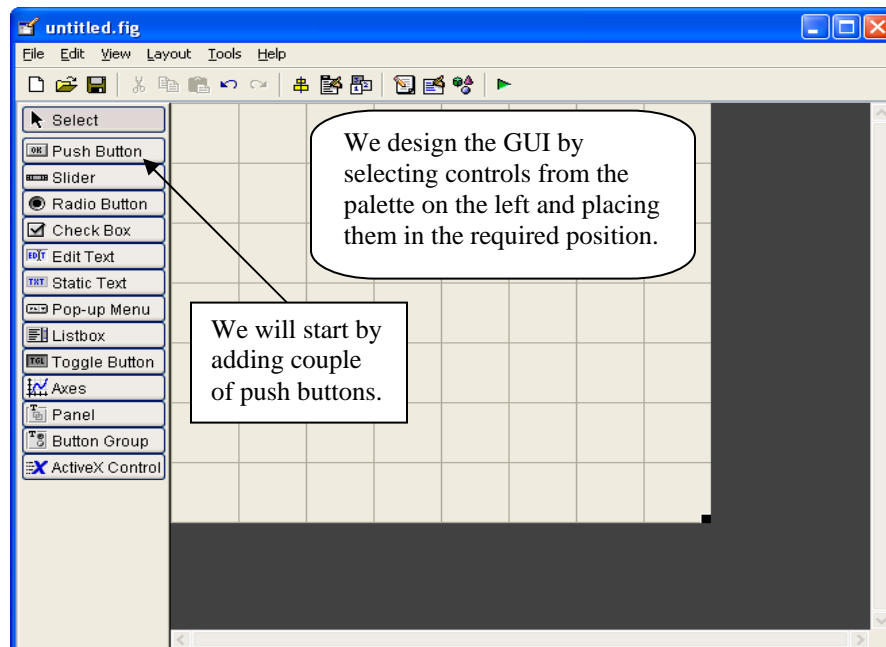

Step 1: Resize your GUI

Step 2: Adding “Push Buttons”

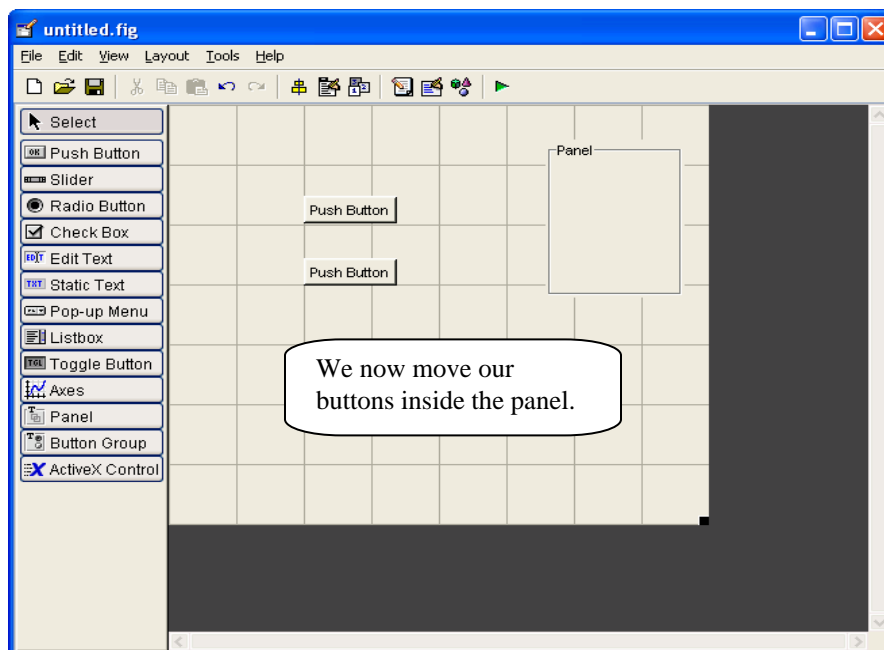

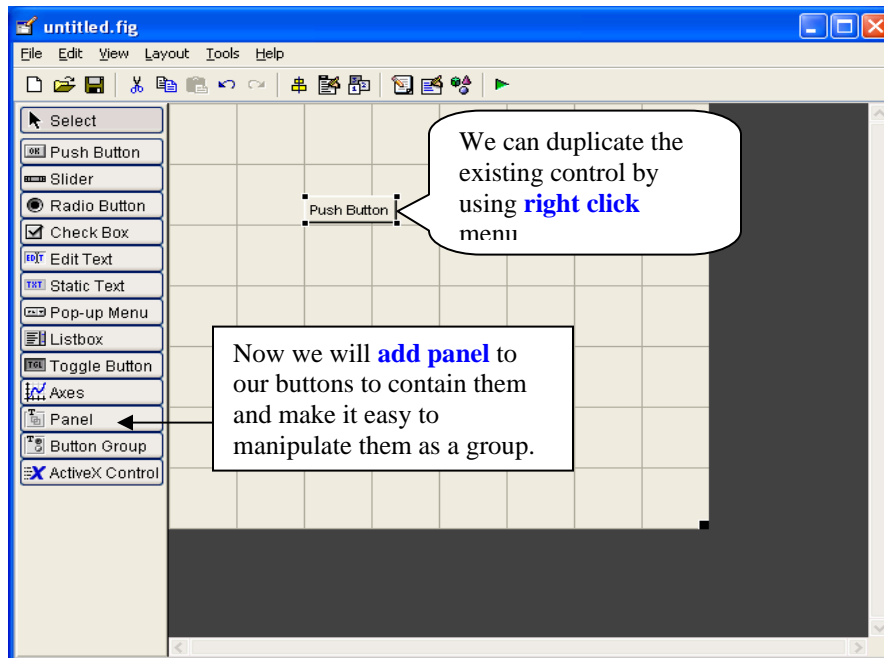

Simply drag the “Push Button” to the position that you want it to be appeared to.

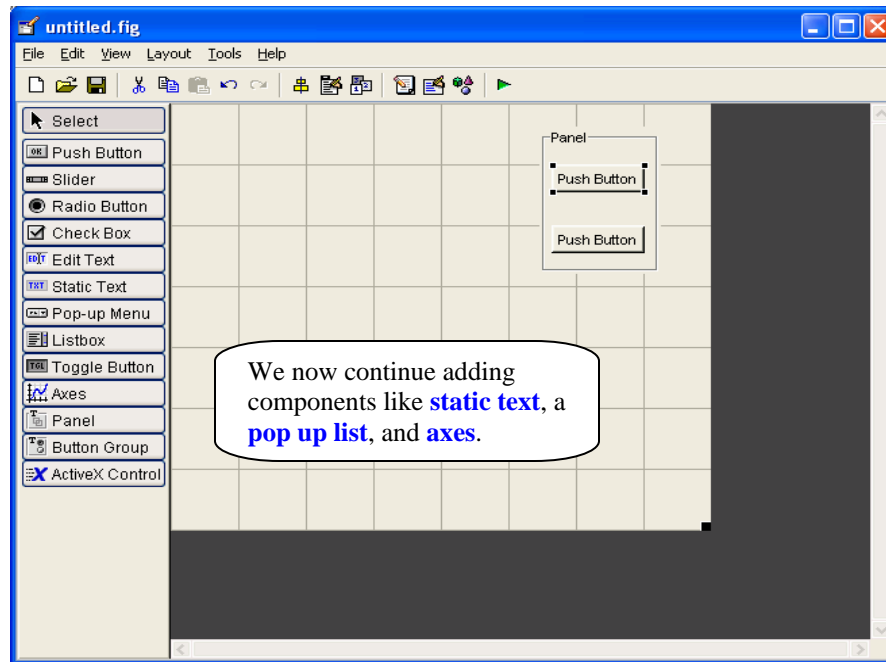

Step 3: Duplication & Adding a “Panel”

To duplicate another “push button”, simply “right click” on the one you just created and choose “Duplicate”.

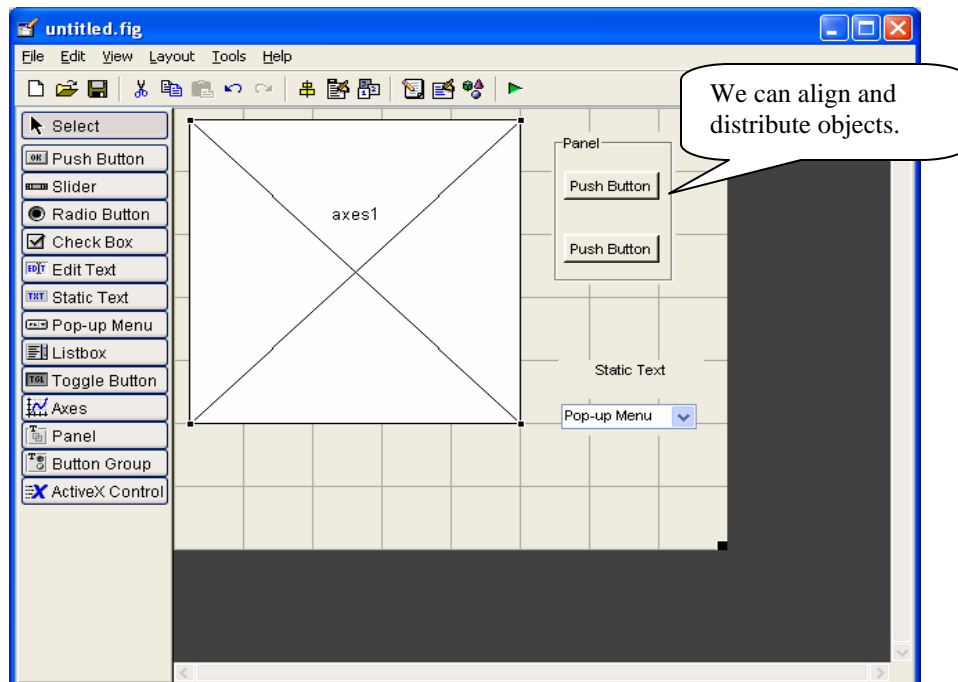

Add a panel after duplicating the push button.

Step 4: Adding “Static Text”, “Pop-up Menu & “Axes”

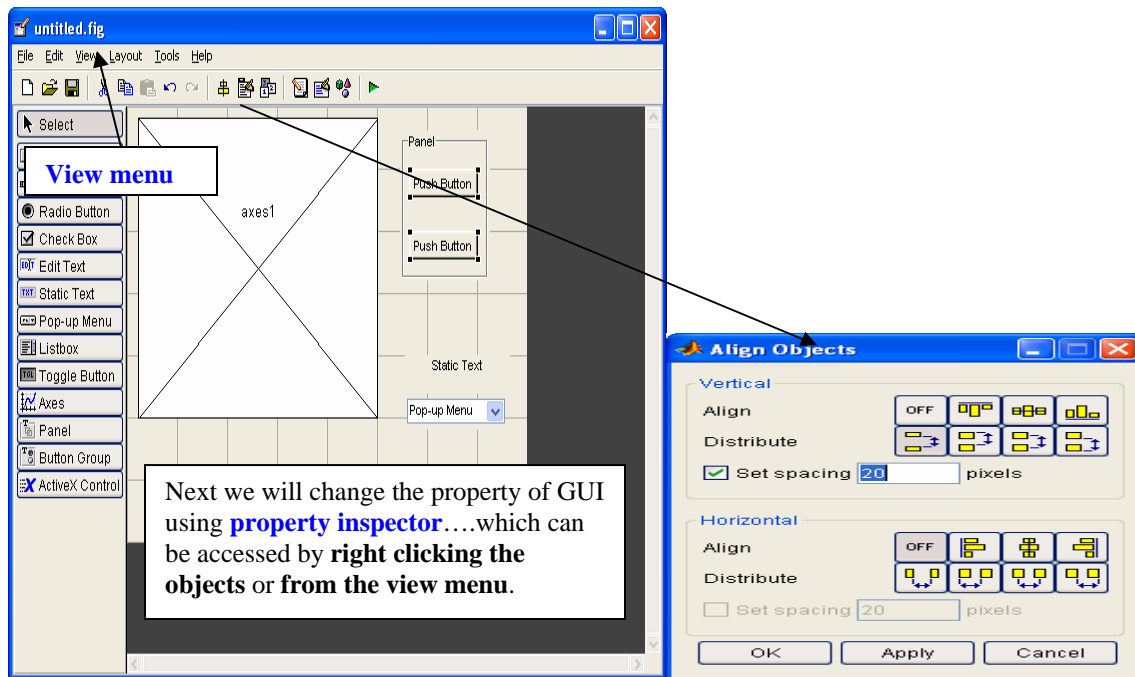

Step 5: Alignment & Setting up Objects

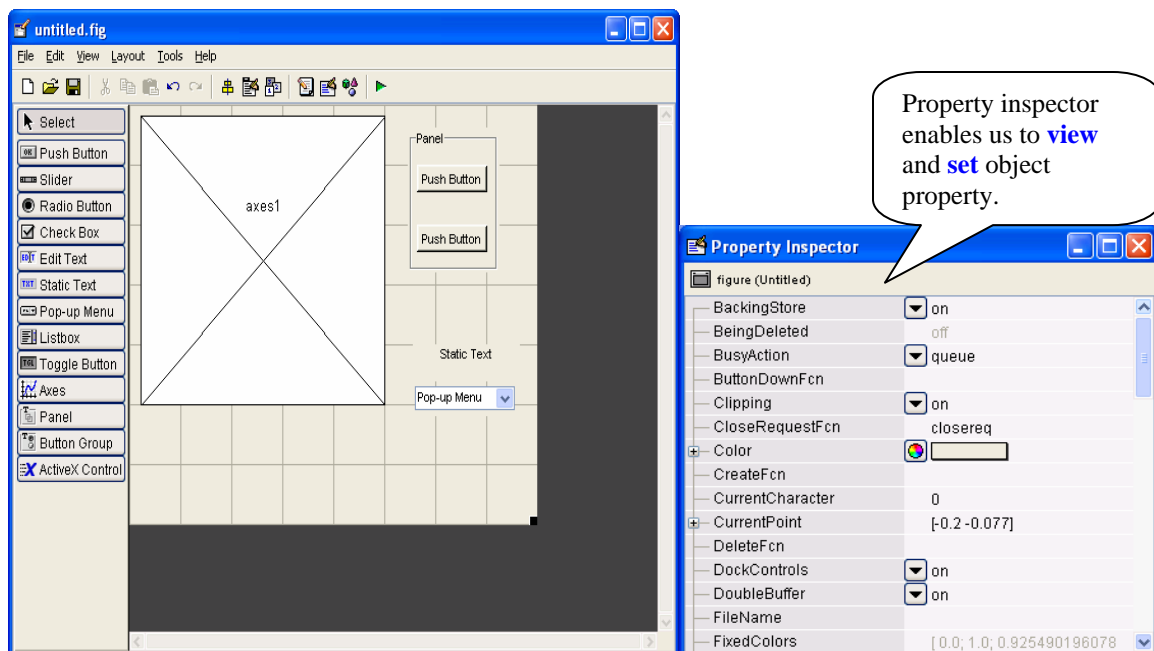

Step 5.1: “Property Inspector”

There are two ways to reach “**property inspector**”!

1. Right click on the object.
2. Select it from the “View” menu

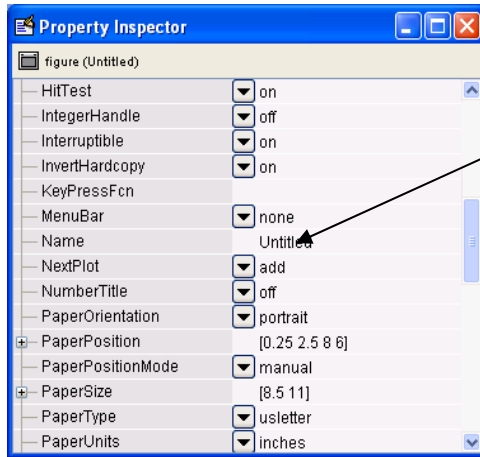

Functions of Property Inspector: View & Set object property

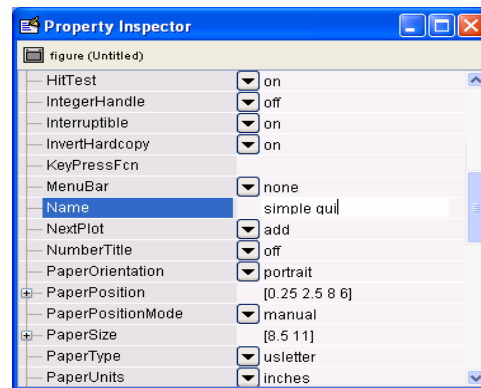

Rename the GUI from “Property Inspector”

Rename it from “Untitled” to “simple gui”

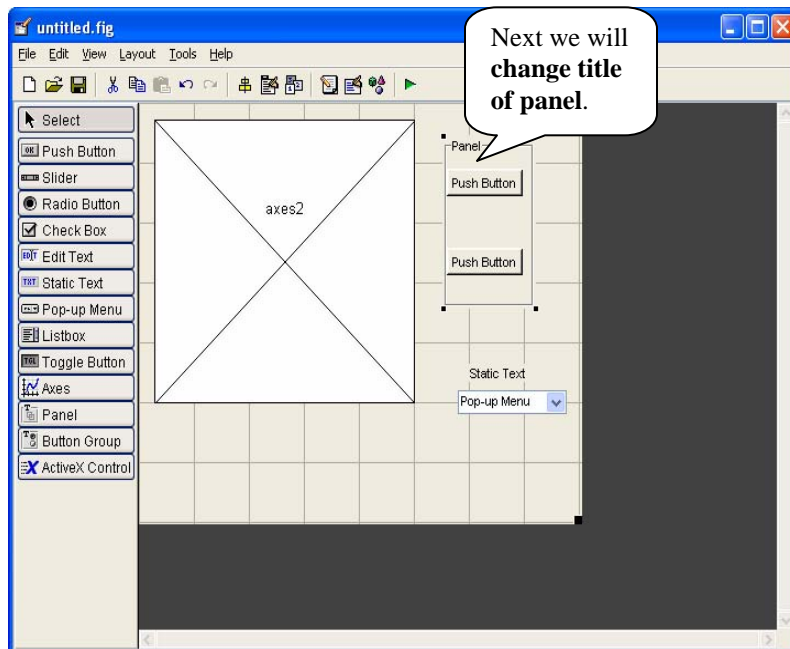

First, we will change the name property of GUI. This is what is displayed in the GUI title. We will change the title to whatever title we want lets say simple gui, as shown below.

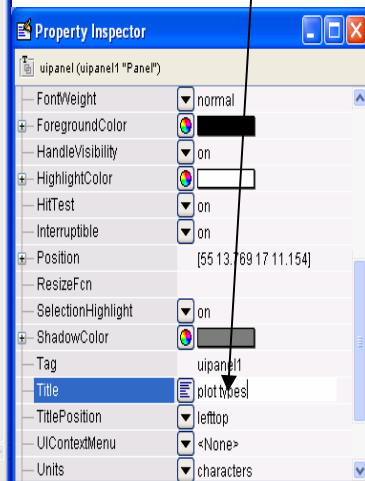

Rename the Panel

Change the “title” from “Panel” to “Plot types”!

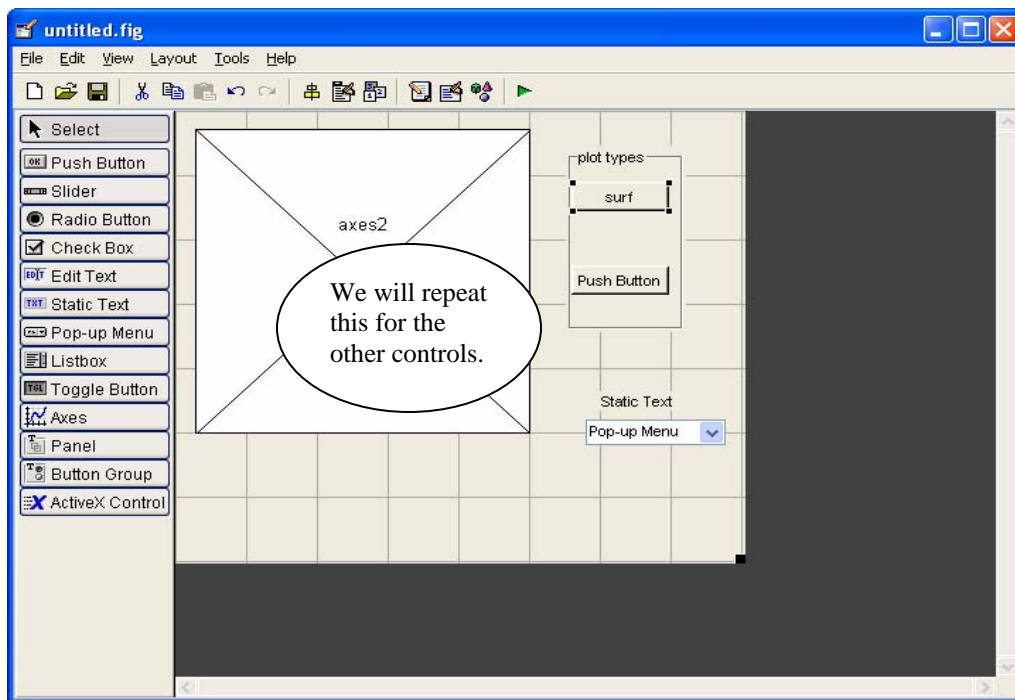

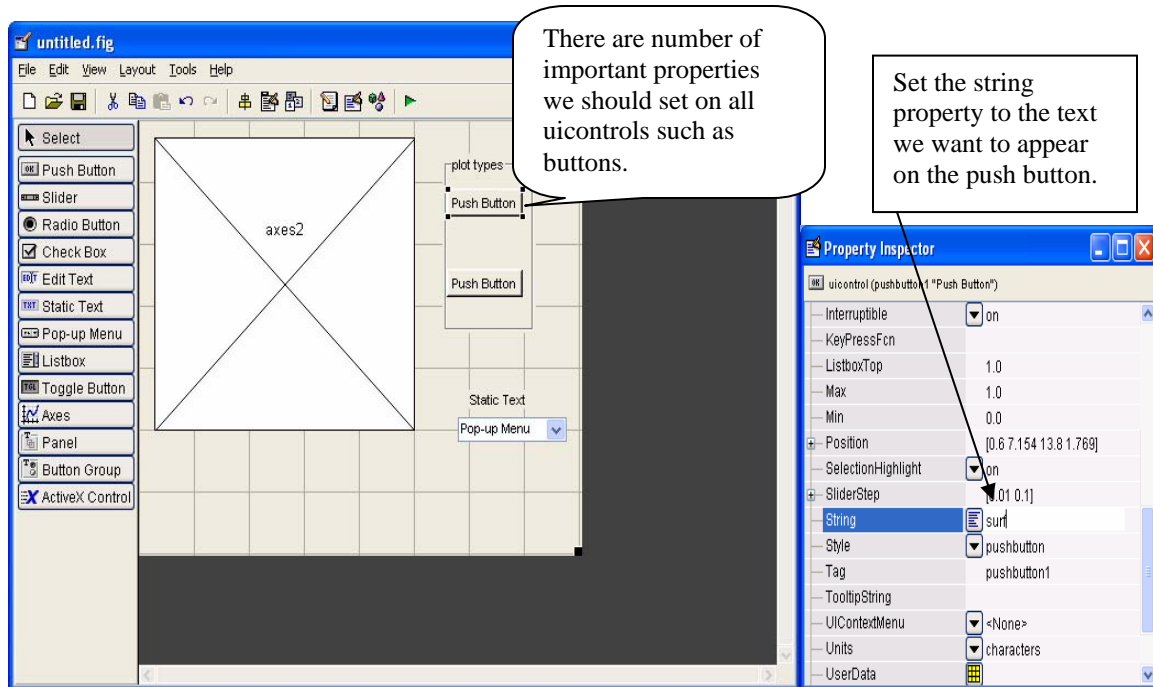

Next we will change title of panel.

We change the title in property Inspector.

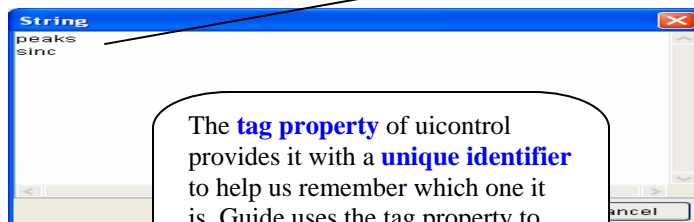

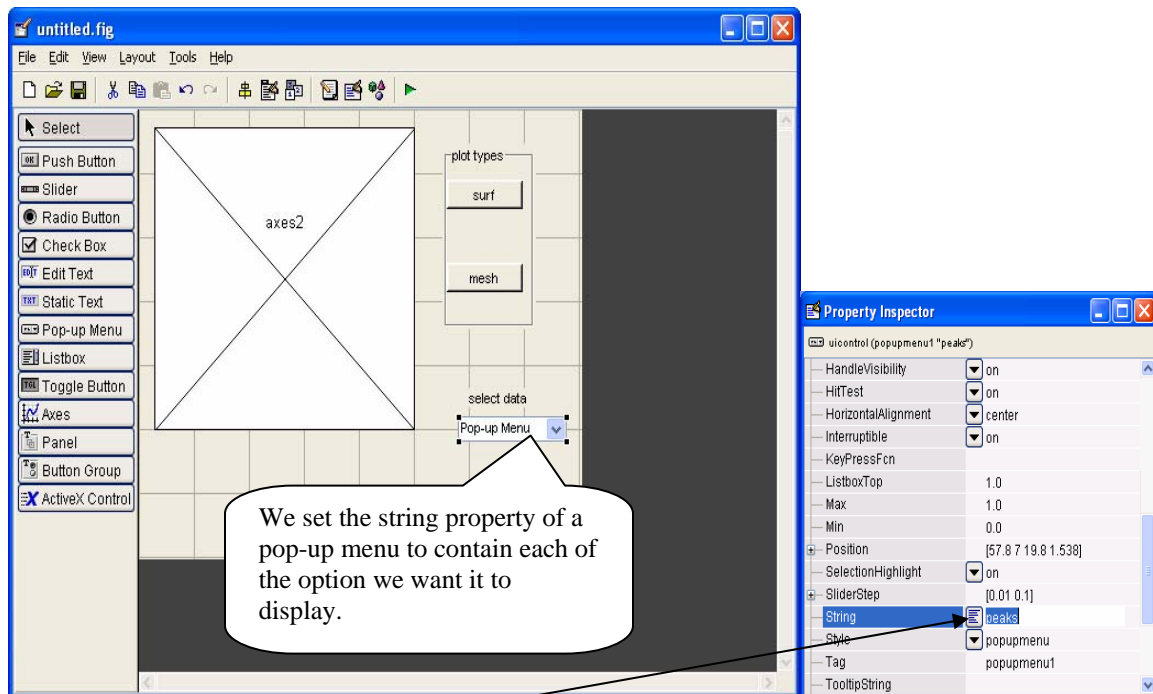

Set up the “String Property”

Change the “string” from “Push Button” to “surf”.

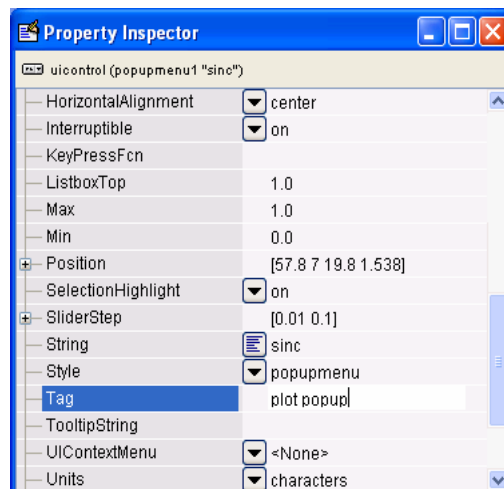

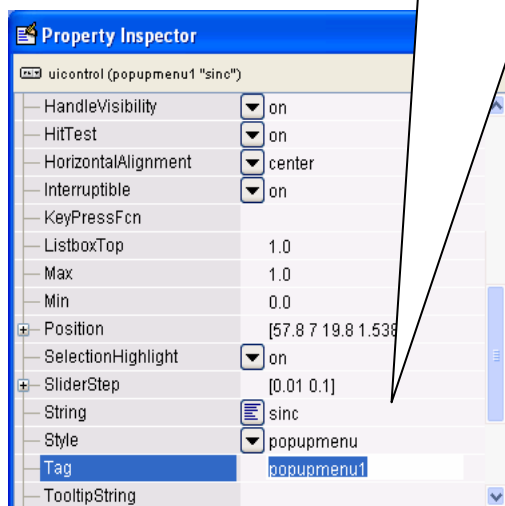

Set up the “Tag Property”

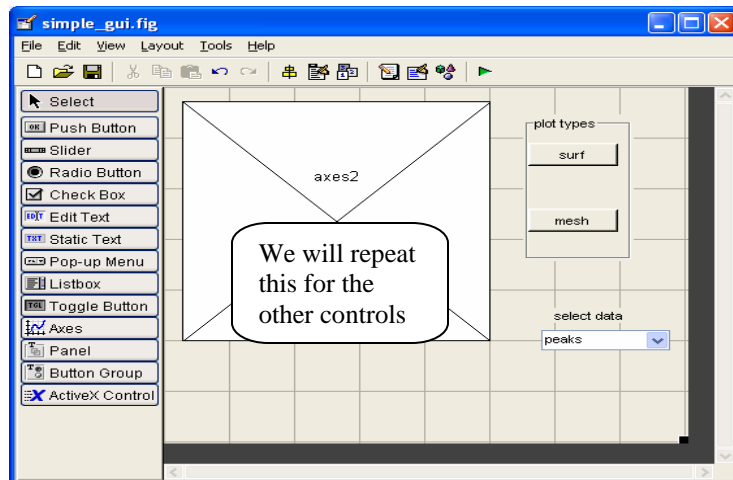

Change the “String” from “Pop-up menu” to “peaks sinc” as shown below.

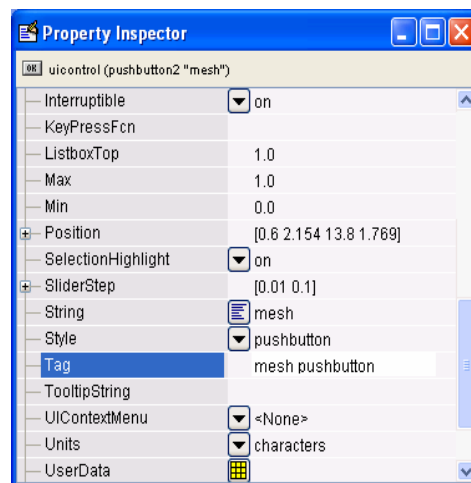

The **tag property** of uicontrol provides it with a **unique identifier** to help us remember which one it is. Guide uses the tag property to name the control's generated M-code function.

Change the “Tag Property” from “popupmenu1” to “plot popup”

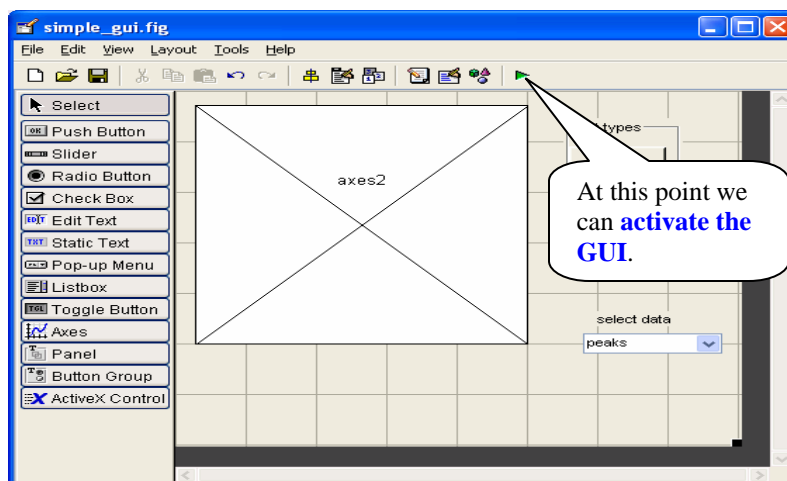

Change the “Tag Property” from “pushbutton1” to “surf pushbutton”
 Change the “Tag Property” from “pushbutton 2” to “mesh push button”

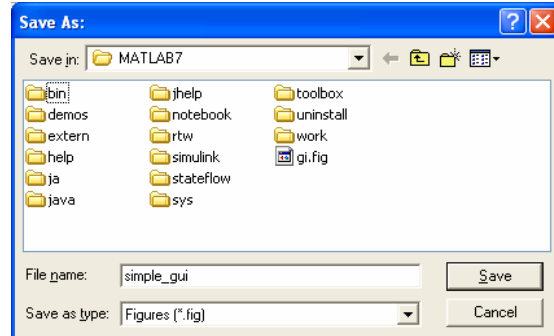

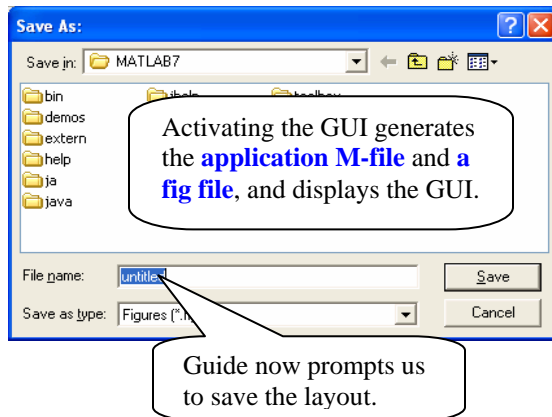

Step 6: Activate the GUI

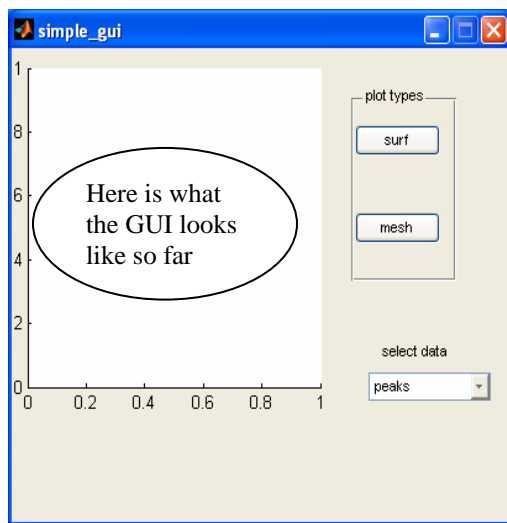

Step 6.1: Save the file

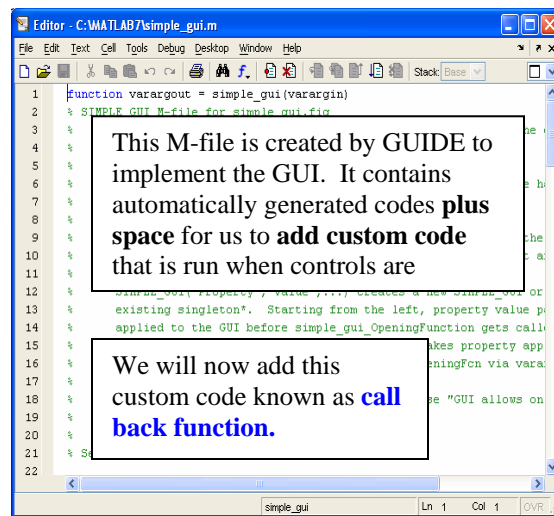

Save the file as “simple_gui”.

Step 6.2: How your GUI looks like?

Step 6.3: Your GUI codes

Step 7: Adding Custom Code (Call Back Function)

The “show functions” button will help us navigate the M-file to each callback.

We will go to the **openingFcn** routine which is called first when GUI runs.

Here we will define three data two data sets and create an initial plot.

In this function, we can load or create data which is used in the GUI and we can do some initial plotting.

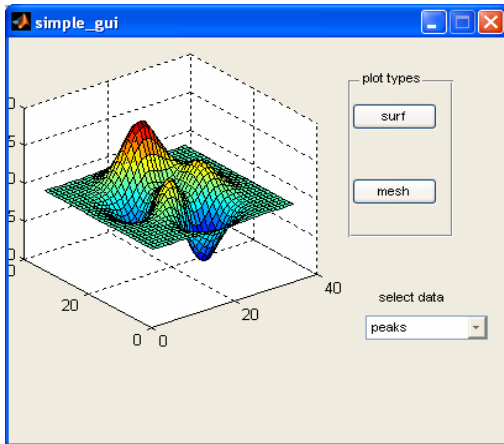

To share data within the GUI we use the **handles** structure which is passed between functions.

This auto generated lines specifies what is returned as an output argument when the GUI is called.

This line at the end is required to update the handles data structure.

We can look at the created GUI again

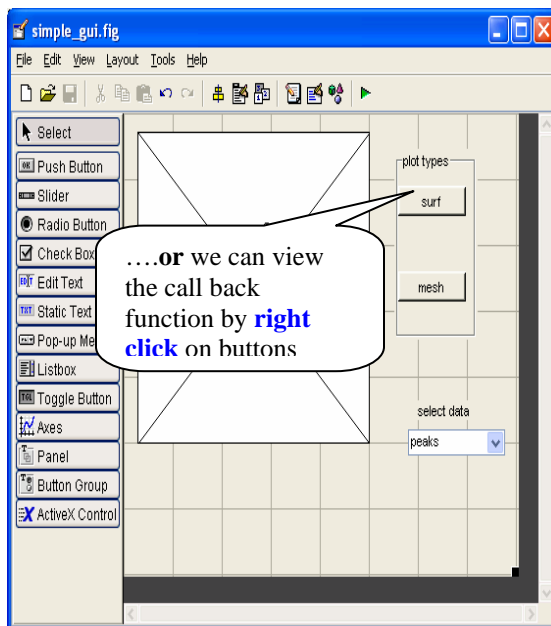

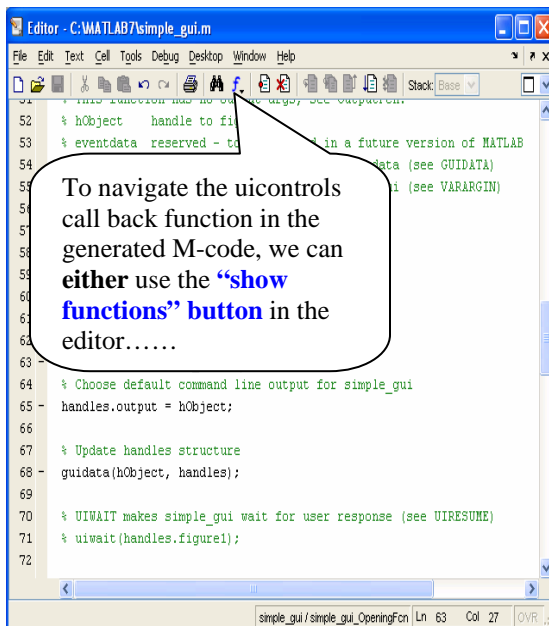

We will switch back to our layout editor.

When a GUI is completed and running and we click on a **user interface control** such as a push button MATLAB executes the controls call back function

There are two ways to execute “**Call Back Function**”.

1. Click on “how functions” button
2. Right Click on the buttons that you want to call back.

For the first push button labeled surf, we will specify that a surface plot of the current selected data is created and we will repeat this for other callbacks.

```

77 % --- Executes on button press in pushbutton1.
78 % hObject handle to pushbutton1 (see GCBO)
79 % eventdata reserved - to be defined in a future version of MATLAB
80 % handles structure with handles and user data (see GUIDATA)
81
82 % --- Executes on button press in pushbutton2.
83 % hObject handle to pushbutton2 (see GCBO)
84 % eventdata reserved - to be defined in a future version of MATLAB
85 % handles structure with handles and user data (see GUIDATA)
86
87 function pushbutton1_Callback(hObject, eventdata, handles)
88 % hObject handle to pushbutton1 (see GCBO)
89 % eventdata reserved - to be defined in a future version of MATLAB
90 % handles structure with handles and user data (see GUIDATA)
91
92 % --- Executes on button press in pushbutton2.
93 % hObject handle to pushbutton2 (see GCBO)
94 % eventdata reserved - to be defined in a future version of MATLAB
95 % handles structure with handles and user data (see GUIDATA)
96
97 function pushbutton2_Callback(hObject, eventdata, handles)
98 % hObject handle to pushbutton2 (see GCBO)
99 % eventdata reserved - to be defined in a future version of MATLAB
100 % handles structure with handles and user data (see GUIDATA)
101
102 % --- Executes on selection change in popupmenu1.
103 function popupmenu1_Callback(hObject, eventdata, handles)
104 % hObject handle to popupmenu1 (see GCBO)
105 % eventdata reserved - to be defined in a future version of MATLAB
106 % handles structure with handles and user data (see GUIDATA)
107
108 % Hints: contents = get(hObject,'String');
109 % str = contents{1};
110
111 % --- Executes during object creation, after setting all properties.
112 function popupmenu1_CreateFcn(hObject, eventdata, handles)
113 % hObject handle to popupmenu1 (see GCBO)
114 % eventdata reserved - to be defined in a future version of MATLAB
115

```

```

86 % --- Executes on button press in pushbutton1.
87 function pushbutton1_Callback(hObject, eventdata, handles)
88 % hObject handle to pushbutton1 (see GCBO)
89 % eventdata reserved - to be defined in a future version of MATLAB
90 % handles structure with handles and user data (see GUIDATA)
91 % display surf plot of current selected data
92 surf(handles.current_data);
93
94 % --- Executes on button press in pushbutton2.
95 function pushbutton2_Callback(hObject, eventdata, handles)
96 % hObject handle to pushbutton2 (see GCBO)
97 % eventdata reserved - to be defined in a future version of MATLAB
98 % handles structure with handles and user data (see GUIDATA)
99 % display mesh plot of current selected data
100 mesh(handles.current_data);
101
102 % --- Executes on selection change in popupmenu1.
103 function popupmenu1_Callback(hObject, eventdata, handles)
104 % hObject handle to popupmenu1 (see GCBO)
105 % eventdata reserved - to be defined in a future version of MATLAB
106 % handles structure with handles and user data (see GUIDATA)
107

```

The pop up menu enables the GUI user to select the data to plot.

```

94 % --- Executes on button press in pushbutton2.
95 function pushbutton2_Callback(hObject, eventdata, handles)
96 % hObject handle to pushbutton2 (see GCBO)
97 % eventdata reserved - to be defined in a future version of MATLAB
98 % handles structure with handles and user data (see GUIDATA)
99 % display mesh plot of current selected data
100 mesh(handles.current_data);
101
102 % --- Executes on selection change in popupmenu1.
103 function popupmenu1_Callback(hObject, eventdata, handles)
104 % hObject handle to popupmenu1 (see GCBO)
105 % eventdata reserved - to be defined in a future version of MATLAB
106 % handles structure with handles and user data (see GUIDATA)
107
108 % Hints: contents = get(hObject,'String');
109 % str = contents{1};
110
111 % --- Executes during object creation, after setting all properties.
112 function popupmenu1_CreateFcn(hObject, eventdata, handles)
113 % hObject handle to popupmenu1 (see GCBO)
114 % eventdata reserved - to be defined in a future version of MATLAB
115

```

Depending upon which menu option is selected...

..the GUI will set the current data to one of the two datasets created before

```

97 % eventdata reserved
98 % handles structure
99 % display mesh plot of
100 mesh(handles.current_data);
101
102 % --- Executes on selection change in popupmenu1.
103 function popupmenu1_Callback(hObject, eventdata, handles)
104 % hObject handle to popupmenu1 (see GCBO)
105 % eventdata reserved - to be defined in a future version of MATLAB
106 % handles structure with handles and user data (see GUIDATA)
107
108 % Hints: contents = get(hObject,'String');
109 % str = contents{1};
110 val=get(hObject,'Value');
111 str=get(hObject,'String');
112 switch str(val)
113 case 'peaks' % user select peaks
114     handles.current_data=handles.peaks;
115 case 'sinc' % user select sinc
116     handles.current_data=handles.sinc;
117 end
118

```

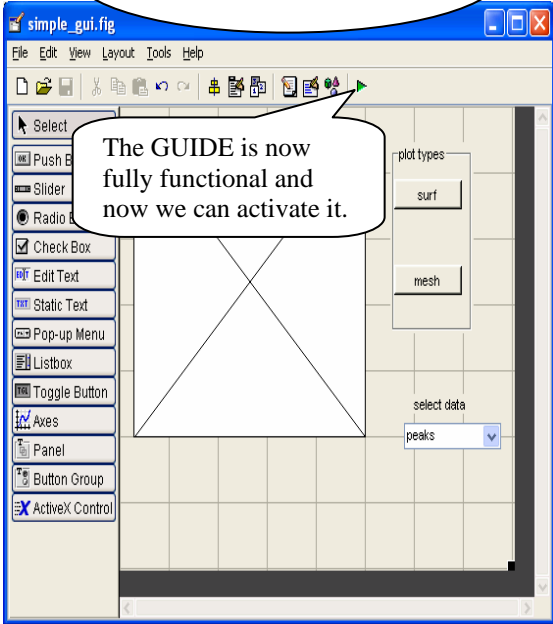

```

Editor - C:\MATLAB7\simple_gui.m
File Edit Text Cell Tools Debug Desktop Window Help
99 %display mesh plot of current selected data
100 mesh(handles.current_data);
101
102 % --- Executes on selection change in pop-up menu.
103 function pop_upmenu1_Callback(hObject, eventdata, handles)
104 % hObject handle to pop_upmenu1 (see GCBO)
105 % eventdata reserved - to be defined in a future version of MATLAB
106 % handles structure with handles and user data (see GUIDATA)
107
108 % Hints: contents = get(hObject,'String') returns pop_upmenu1 contents
109 % contents = get(hObject,'Value') returns selected item from pop_upmenu1
110 val=get(hObject,'value');
111 str=get(hObject,'string');
112 switch str(val)
113 case 'peaks' % user select
114     handles.current_data=peaks;
115 case 'surf' % user select
116     handles.current_data=surf;
117 end
118 guidata(hObject,handles);
119 % --- Executes during object creation, after setting all properties.
120 function pop_upmenu1_CreateFcn(hObject, eventdata, handles)

```

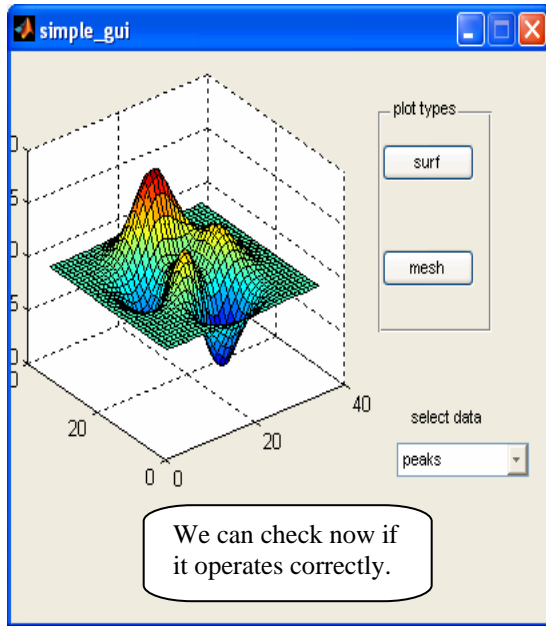

We now need to update the handles data structure once again.

We will bring back the guide layout editor...

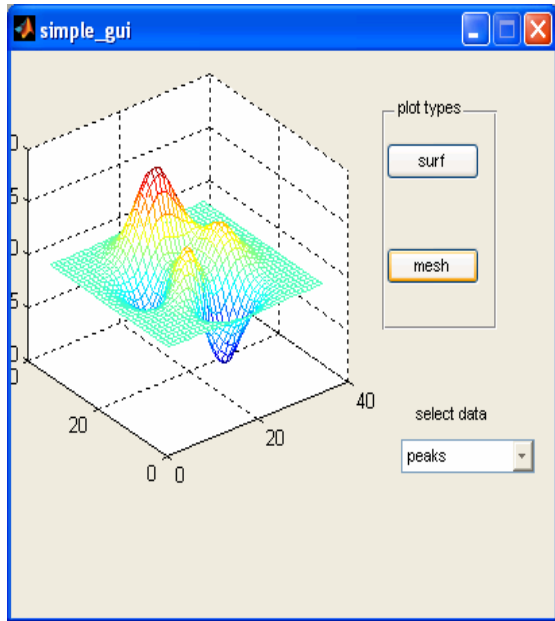

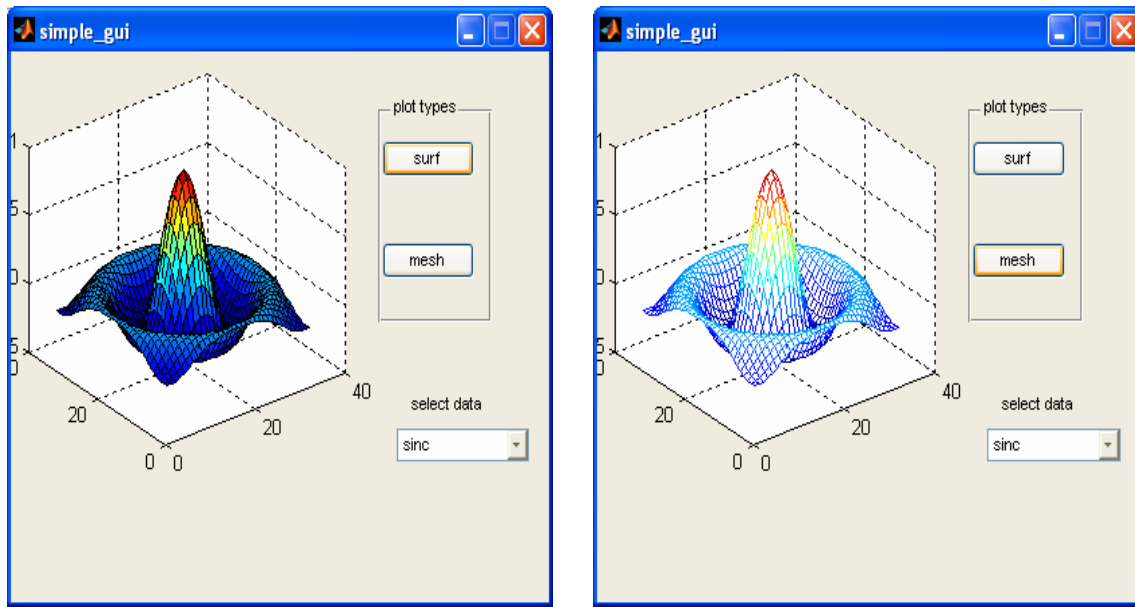

The GUIDE is now fully functional and now we can activate it.

Final Step: Our GUI Outcome

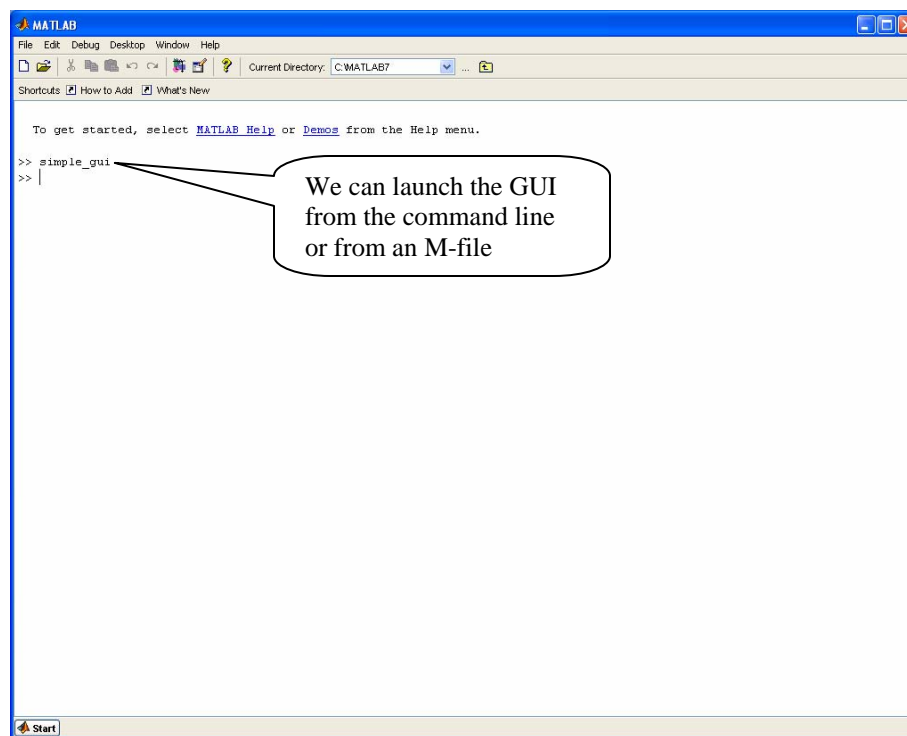

We can check now if it operates correctly.

How to Launch GUI?

This concludes the simple demonstration how to create GUI.
